Swiss Camp melt

7.3.2016

Calculated from AWS date 2015

JD 167 start of surface height change

0.8 m above ground

JD 205 height at 1.9m

$$\Delta h = 1.1 \text{ m}$$

Snow survey spring 2015 = 115 cm

 \Rightarrow JD 205 all snow melted \Rightarrow ice surface did not change in
height during the summer? \Rightarrow station should be ok this year?

24.3.16

Martin Proleda Priorities

1. Density profile at least 1.5m

2. SHP 6-10

3. Temperature profile to 1.5m

4. Ice cube profile

5. IR picture of profile

6. SHP more than 10, min

6. or surface SSE transects

IR surface: Summit, EGRP, Summit

S-Power: logarane in + out

NASA-SE

Trip needs- short + long crane radiometer
for altitude profile at base camp

→ insulator to plane

- heating blanket

→ Trillium OR S, SC

- Lens + Howard - quartz

→ 4x4 beams for Snow Camp

- 3 snow boxes from VECO ← (x)

→ cold transport from Kongsberg - ZMR

- 3 snow to Summit

⇒ 50 flaps with flaps ← (x)

→ Half flaps from transport to

Neuca

⇒ boards + beams wood

CP1 to SC: ca. 4 days, 1 dg.

→ GPR Markus Thurn

Swiss Camp put-in

5 May 2016

CP1

60° 52' 27.7" N

47° 01' 27.8" W 1948m

At CP no data on the logger, it stopped recording one month after the last visit in May 2015. Had to re-load the CP Goes Campbell program to work again. Had to change out the upper snow sensor, all the rest was working. Set transceiver was stuck, GPS was not syncing, reset all but sync did not occur before we left. Tim other arrived 4.5 h after our landing at CP1.

We had two loads to Swiss Camp
Crew: Kari, Bianca, Martin Schuebeli, Lion Schuebeli
Vene Grischberger, Netje Gellman, Ravi

5 May 2016 Swiss Camp

The camp was in great shape, the snow in the tents the platform was slightly bent on the fitcher tent. I have not figured out yet why.

All tents were put up when Brian and I returned from CP1. It was quite warm and low winds,

Swiss Camp

6 May 16

PM10: $69^{\circ} 30' 04'' N$

$49^{\circ} 33' 34'' N$ 1005 m
not down looking at the data yet

PM1: $65^{\circ} 29' 37'' N$

$49^{\circ} 42' 41'' N$ 800 m

Dec logger stopped on Apr 10, 2016 recording, but have no idea why?

GPS had power but recorded only every day till end of Dec 2015. At least it worked that far! But no data files in January 2016.

Towers need to be redone, as the GPS D100 power, will do that tomorrow

7.5.16 CP1 and DNT0

Redrilling both sites is planned.

There was 3m melt the previous season.

But I did only observe 0.5m melt below the Summit Camp Station.

and no melt at the SC AWS, only

the snow melted away.

CP1 re-drilling

7.5.2016

Put the beam 4m into the ice, connection is just at the ice horizon, with 60cm snow.

I cut the power cable to the GPS, but repaired afterwards.

Had to retape the Campbell program. Best need to check all the channels next time. Pressure sensor to be off and needs a special parameter in the program. Also HWP45 not sure if they were working.

→ Down to bed no time for drilling, will do it next day.

It was a calm and warm day!

J.T. 16

Ans Tower: downloaded data
from C1000 and all records on
the logs, wind speed 1 m/s
working all the rest of the day (4)

to in Tower: Downloaded C1000
and all data up to today. Memory
card had only videos from Apr 25/16

HMP 45 boxes have not working
because CR Base program under the
control Post 6, need to install a
new HMP 45.

Snow height instrument stopped yesterday.

On Apr 11, 2016 there was a
problem on Temp. sensor showing +20
(Tc only) but it was not that we
also data logs stopped recording on
memory card.

10.5.2016

10 m Tower

Adding a new HMP155A
Temp/Hum sensor at the lower
level (so I don't need the
control port 6 on CR1000 which
is used for the Radar.

Yellow - Temp SE

Blue - Hum SE

White, Black, Green = \neq ground

Red - 12V (SW 12V)

Red - power

clear - shield

This is the upper sensor (10m).

11.5.16 Swiss Camp → yesterday 10.5.16
 Snow party Martin, Lina, Marie, Steve
 left for CP1 and arrived after ~ 7 hours
 with lot of new snow. It was melting
 most of the day. Yesterday they made
 only 5 km on foot due to very soft
 snow. They have to travel at night,
 when the snow will refreeze.

Swiss Camp GPS 11.5.16
 New GPS setting for long-term recording.

(B)	1 Dec 2016	→	10 Dec 2016	240
(C)	1 Feb 2017	→	10 Feb 2017	240
(D)	1 Apr 2017	→	10 CT 2017	5424

Φ 465 R7 at Swiss Camp } both
 Φ 471 at down 10 } programmes

K 5196 former Swiss Camp shows 1996 data
 for new files → taking home.

I 3532 same problem, h/c date 3/26/96!
 for newly generated files.

13.5.14 Crawford traverse group

1/2 tank fuel left around

1/4 tank up 50km from S

1 jerry can = 1 tank.

up 50 and up 16 need new GPS

units

9
up 18?

DW10

13.5.14

Recharging tent could not finish the job, the batteries went empty after we drilled twice - could not get the ice on east of the hole after

2m depth. Drilled twice to 2.5m.

There was 1m of snow with 3 layers of ice, one of which 5cm pure ice - closest to the top.

14.5.

Snow Travel Group

15km SC from up 50km
mop, zhadit Hiti Ras

→ Need tomorrow 4 canisters fuel
Dinner like Rice, others,
Breakfast milk + jam
Chocolate, Pork, anything else?

JAR

14.5.16

Installed GPS unit 2 (Powers D10 unit)
40180 and it started recording

- Data logger not working, even
when connected with power cable
from satellite transmitter (?)

Not sure why, recording worked for
1.5 days after my scan a few
days ago

2016-05-08 stopped but had 13.7V!

Will have to go back and check data
logger with VDH meter, maybe replace
the data logger. First let's pull some
cables to see if I get the circuit
working

= seems both humidity sensors are out

→ Pressure only give to full value

15.5.16

JAR1

Went back to Jar 1 and updated
the data logger. It was the first
SD1 snow sensor height which gave
a signal that blocked the data logger.
I changed the data logger, but the
problem (no snow and could not record)
did not go away. Then I discovered
without sounds in it I found out the
SD1 was the problem.

All working again (not SD1) and
also checked the satellite transmitter which
seems to work.

Source Cap.

15.5.16

Things to do:

- to run to aw, transmitter test.
- Snow survey at both AWS's
- up 16 GPS by shadow
- up 50 GPS by plane?
- is CP1 working now?
- Why is Trimble giving me 1998 data
for the files?

7208 ipg dropped backup!

16.5

Swiss Camp

Harkin Schneider + Neue freischlager

arrive at 9 am after more than 6 days

on travel. They pulled the radar sleds

to look from CP1 to SC.

19.5.2016

Sandy - South Pole

Dye-2

19.5.16

Weather prediction is good and we
do this flight first.

Left at 10:15 from Sandy

Transmitter: 37.4 dBm Forward power
14.3 dBm Reflected Power

Realigned antenna to 213°, it
was 310° (there for not x anything)

Moved the mast, and held 1 more
wind dir sensor by 10° only.

63° 08' 939' N

44° 49.030' W

→ I love you!! I love you too!

All works well, snow pit density
done by Harkin + Peng.

We hope to land on the way back
from S-Pole at Dye-11. Since the
weather will change along the way, work
tomorrow.

X-mit is working, but pressure sensor
out.

Wind speed 2 is out

Pressure sensor ok!

Wind wheel
missing
needed to replace
the front of the
"Plane".

SD1 out since last visit!

We replaced the instrument but did not
work. → Only cable or propane could
be the error.

Humidity 2 is out, but not repaired.

20.5.2016

Saddle

NASA-SE

20.5.16

Left at 8:30 am for Saddle, then NASA-
SE. Frost mainly from West.

Tc gir 1 too high - strange - check wire!
Wind 1 not working correctly

SD 1 ant

SD 2 might be ant

65° 59' 55.6"N

044° 30' 09.2"W 2451m

Exchanged Tc 2 (upper) which was now

Repaired both SD 1, 2, ok now

Replaced wind, but V speed was on
and off. Dir ok.

Rest is working.

Wind speed 2 seems to be
all the rest seems working, but there was
no transmit \Rightarrow antenna?

Snow 1 noisy ✓

Snow 2 out ✓

66° 28' 41.6"N

2382m

42° 29' 43.5"W

• Extended tower - no problems

• Wind speed was out - repaired.

• Replaced snow SD 1

• Reset X-mit, azimuth 213 was correct.

Martine + Henc Snow near.

20.5.16

Northern Traverse - Prep.

20.5.16

Summit:

- needs extension
- pressure not working
- needs 2nd solar panel

• Humboldt \Rightarrow battery box

• Potomac \Rightarrow new battery box
 \Rightarrow redrilling??

EGRIP:

- needs extension (more stations?)

Total extension: 5 Cages + 5 stations ✓

22.5.2016

Summit

AUS + BSRW

Extended AUS tower and replaced
pressure sensor and added 2nd solar
panel

⊗ → address CS106 sensor,
multiplexer should be
- 24, not - 134

Extended both BSRW towers with
extension from ETH. The solar tower
tower needs two cables before the next
extension, both data cables to the
other radiometer tower. Send email to
Karl.

New level heights are given on previous
pages

Summit 50m tower

22.5

Moved data logger box at least
1.9m above the snow, and
all the lower 3 arms to
100, 200 cm, 3 level not measured
but moved ca 70cm higher.

The snow transmitter cable needs an
extension, did not connect because too
short now. Send Karl email and
pictures.

23.5.286

Summer 7 - NASA IE

Again a very calm day at Sun-
did some small tasks in the morning
(added solar panel, measured height)
Peipe + Lisa did snow density measurements.

no extension needed, but no xmit?

NASA-IE

75° 00.11.8

all worked except HT,

29° 59°.126

could not read.

Antenna was off by 165°, turned to
223° Az, and vertical was at 0°, now
at 7°. Transmitted had data and
seems to work!

Fuel Cash @ WEEK

23.5.

Fuel cash in drums @ WEEK:

7 drums for Steffen

3 drums for GLISN

Please mark mt's clearly for
picking up after use.

23.5 NASA-U to NGRIB

Left NASA-U at 6:30 pm.

weather still very good!

Plan:

24.5 EGRIB - NASA-U

+ EGRIB extension

25.5 EGRIB - UEP - GIS - Qanunq

26.5 Q - Petermann - Humbuk - Q

27.5 Dry Ak

28.5 Q - SFJ

EGRIP

24.5.16

Arrived yesterday 7:30pm, clear and calm
weather, food dinner and discussion.

Can we come back to EGRIB house
Qanunq on the way south to pick-up
the dogs. The detour would be 2 hours!

Preparing for NASA-U - with extent today.
accumulation is 0.8m

transmitted data: 2016 (battery d/)

- SD-1 needs replacement

- Pressure is questionable → replace!
all other sensors are ok

CS 106 sensor (new)

Set to normal mode, input
must bridge (CS105 option is 1)
Set pressure option to 0 in program!

24.5.2016

Pressure Sensor

EGRIP

NASA-U

24.5.16

changedCS 105: $f_{\text{log}} = 1$

Volt Diff (pressure, 1, mV2500, 4, 1, 0, - 60Hz,
• 184, 200)

CS 106: $f_{\text{log}} = 0$

Volt Diff (press, - 60Hz, • 24, 200)

Program needs to be adapted!

73° 50' . 27" W

233?

49° 31' 23.5 W

Replaced pressure CS 105 with CS 106

→ needs new coefficient . 24 instead of . 184

→ data needs to be processed!

→ one source was intermittent / appears one!

But we could not reach the sensor.

Snow accumulation was only ~ 26cm,
 we did not extend the towers. Next
 year the ionosphere will be just
 below the snow.

snow density meas. by Gino + Neige

24.5.16

EGIP

Will move AWS closer to camp, now
it is 4km from Dome.

Will dig out the battery box and
pull it out with crane.

EGIPB

24.5.16

old, $75^{\circ} 35' 37.7'' N$
 $35^{\circ} 59' 19.1'' W$ 2693

Station moved to camp, beside the
snow compaction site from the end
the GEM AWS.

25.5 NEEM - GITS - Q. on schedule

26.5 Q. - Petermann - Humboldt

27.5 Rest day

28.5 Q. - Sandy

No new coordinates taken All working after
the move with the bulldozers! Had to
shovel a 2m hole to fit the new
site of EGIP.

Left EGIP next morning at 8am
to NEEM, including the station
dubor

25.5.16 NEEN # 23

GITS

25.5.16

Wind is out (0)

Pressure is 999? - 6998 - pressure is out!

77° 26 28.2 N 2553

51° 04 57 W

Extended in record time, 1h?

All working except pressure, checked
cables but not over, had no spare
pressure sensor left.

Extended power cable, +1 extension

Density probe + 1

Needs 2nd SD instrument - no it worked

Downloaded Memory dump, but looks like
binary data. Downloaded directly from ocean
and it worked.

Extended power, and power cable.

All dunnies working.

We did both extensions in 2 hours and
which is a new record.

Flying to Raanoo, now, my favorite place
in Greenland!

255

Qaanaaq

clear day

Humboldt

6 Dec

26.5.16

Arrived early afternoon, Hans was
already waiting for us in the airport.

We went by late afternoon to burn
for a while and on the sea ice.

After dinner hike along the coast towards
airport with view on Helmer + Wohlwendens
Isles.

Stopped xunt JD 340, battery was
3V \rightarrow needs new battery!

Put battery here!

Petermann

11.20 (JD 334)

Also low on battery, NOV stopped xunt

$V = 9.5$ Volts.

$T_{\text{air}, 1, 2} = \text{out}$, $U_2 = \text{out}$

no spare battery left.

Table 46

Log-id, Year, JD, hour, SWin, SWout, net
 $T_{\text{air}, 1, 2}$, $T_{\text{air}, 1, 2}$, $rh_{1, 2}$, $U_{1, 2}$

Table 48

Log-id, $V_{\text{dir}, 1, 2}$, press, $SD_{1, 2}$, hct.

26.5.2016

Petermann

Replaced two snow heaps

Replaced battery box

80° 05' 49.5" N 58° 08' 18.1" W

944 m

Downloaded Hanny clip, again
data is binary format, need to convert.

Downloaded by attaching PC to camera.

All other camera work. 1-2 years

until new drilling needed.

Need try to reach Humboldt again,
we have low clouds on our
way here.Humboldt

26.5

Could not land, were very close
and wanted see the station, but no
contact under the clouds and
after two approaches had to pull up.Back to Qaanaaq, may be Humboldt
on the way to Søndy if the clouds
are lifting.Last night at Qaanaaq, then end of
field work and flight back to Søndy.

27.5

Quincy - Humboldt

Left Q. around 10am and will try
Humboldt again before going south.

This will be our return flight to
Sandy and the end of a poor

field season.

Humboldt Line AWS station: 1989m

$78^{\circ} 31' 40.7'' N$, $56^{\circ} 50' 29.5'' W$

Landed and downloaded data.

Memory chips had only data until Dec 71
when transmission stopped. There was a

table header error (date) and I had

to reset the tables on CRANO, so

could not download the rest for

Dec to May. All channels were

working (unfortunately)

Humboldt - Upernivik

27.5.16

The old story: Live out at Summit without
any instructions - we left them at EGRP.^p

Upernivik - Core 7 492km

Core 7 - Sandy 443

935km

We went to Core 7 camp at

$70^{\circ} 18' 10.21'' N$, $44^{\circ} 34' 0.18'' W$ 2600m

to drop 1 gallon oil for Sirodoos.

This location was 492 km from Upernivik,

a debut of their when compared to

Upernivik - Sandy. This should be closer

to the Osterberg group.^p

I paid for the oil 675kr from my
pocket. - loco.

from Jay 69° 39' 55.1" N, 48° 59' 48.4" W

Ans preparation 2017

CP1 needs extension, not X unit
→ need an extended unit
→ Battery not sufficient 4 month warranty
in middle of winter, raw Rotten

Dye-II maybe needs extension, yes
Battery went to 11.8V, but works on
water

EGRIP no extension needed
not red to make, short warm beds.
Snow kept was out in 2016

GITS ✓ data got in Feb for 2 weeks!

was extended in 2016

Transmission ok!

Wired @ not connected or out?
some @ + @ are out, battery 12V!

Small Ans - Ref retraining!

① → in real outdoor hanger

Extension: CP1 Dye-2 JARA, NASE-4

④ → 6 spurs in kangs!

Battery box: CP → 2 boxes in kanger
hum

Hum: extended in 2015, works ok.

⇒ Needs new battery ✓ let's check
the transmission is ok ✓
SI changed the unit to 335

JARA: Extension needs to be rechecked

NASE F: no extension needed
recordings work well, X unit ??

NASH-SE: extended in 2016

works well

Ans for 2nd

WKA M: Extension needed!

works well

NEEM: extended in 2nd 6

works well

Pet: no extension needed, maybe

~~1st~~ redrilling! Has new battery box
transmission ok, but battery gets low/weak
⇒ Solar power & Space duct power
Team both out

Sadik: Should be ok in 1 year!

rest ok,

S-Dome: extension needed

rest ok

Summit: extended in 2nd 6

rest ok

Summit: no extension needed

Turner-W: transmission good
no extension needed
battery ok, wind dr (2) out
Solar (2) intermittent

Order spare parts for AWS

Eric Riggs station 79°N?

Extensions (5) CP1, PhC1, JAP1, NASP-4
(Sadik)

Batteries (2) CP1, (Hume)

Redrilling (1) Pet,

1.12.2016

Aufarchen

PE - air ok, power ok

PE - blue ok, " "

PE - green ended JD 225, needs

→ battery

PE - air to ground ok, window 1,2 not equal!
 SD card 1,2 not working?

PE - blue Source 2 out, all the rest ok

PE - green until 225, then power out
 not road not connected or missing
 So mix ② out, battery 9V, stopped
